

ANJELIKA TAN

Product Manager

anjelikatan99@gmail.com | 0494 726 205 | Melbourne, VIC | anjelikatan.com | linkedin.com/in/anjelika-tan-219522148

Product Manager with a Computer Science background who takes complex B2B2C products from ambiguous client need to testable capability, launch and live operation. My work spans APIs, integrations, workflow automation, commerce, identity and large-scale operations. I also use source-linked product context and human review to make AI-assisted delivery safer.

EXPERIENCE

Product Manager

May 2024 - Present

Returning AI Pte Ltd, Singapore

- Led the product and integration workstream for a multi-region brokerage loyalty programme across source-data mapping, authenticated member experiences, trading-credit automation, campaign rules, operational tooling, monitored launch and live incident recovery.
- Framed and verified a production Store correction for nearly 3,000 historical purchase responses; rejected a manual record-by-record rewrite and partnered with engineering on correct future writes plus backward-compatible historical reads, followed by positive client feedback.
- Shaped Custom and Data Workflows from configurable actions into an execution platform with concurrency, testing, retry, stop-on-error, branching, idempotent events and run history; followed missed and duplicate trigger cases into investigation and recovery requirements.
- Owned product requirements for large-community operations after QA/test exposed about 360 MB of duplicated client state at 200,000 records; QA later loaded a 300,000-record list and completed a 50,000-record multi-field update in under 15 minutes, while separate production jobs ran in batches up to 5,000 records.
- Defined a two-phase identity approach: fail-closed authentication for zero, one or multiple matches, followed by a separate community-scoped indexed identifier for create, import and update flows without broadening authentication.
- Designed an AI-ready product-memory practice that turns feature, client, QA and technical context into source-qualified documentation, handoffs, test plans and successor context, with explicit human review, attribution, uncertainty and secret-exclusion rules.
- Ran a 100-check Store API review with 83 passes, 15 failures and two clarification items, and made operability part of product scope through API logs, workflow run history and inspectable failure evidence.

Financial Advisor

Dec 2021 - Jan 2024

Great Eastern, Singapore

- Built trust-based relationships with individual and SME clients, translating regulated financial products into clear recommendations and decisions.
- Developed an Excel-based financial planning calculator with visual scenarios to make trade-offs easier to understand during advisory discussions.

SKILLS

- **Product & Platform:** B2B2C SaaS, platform products, PRDs, acceptance criteria, prioritisation, stakeholder management
- **APIs & Integrations:** API design and documentation, REST/JSON, SDKs, webhooks, OAuth 2.0, CRM and data integrations, identity and access
- **Delivery & Quality:** cross-functional delivery, QA/UAT, release management, incident response, client operations, roadmap sequencing
- **Systems & Operations:** workflow automation, observability, idempotency, asynchronous and queued processing, bulk operations, permissions
- **Technical Fluency:** data mapping, SQL-backed integrations, event-driven workflows, SQS concepts, Figma, ClickUp
- **AI Product Operations:** AI-enabled product workflows, grounded agent workflows, product knowledge systems, context engineering, human-in-the-loop review, Claude, ChatGPT, Codex, Cursor
- **Languages:** English (native), Chinese (fluent), Japanese (conversational)

EDUCATION

Bachelor of Computer Science

Aug 2021 - Oct 2024

University of London (SIM Global Education)
